

## Tucson Garbage Disposal Repair

Garbage disposals are a luxury found at kitchen sinks in many homes. Some people rely on this appliance in everyday use, but it is not mandatory to have such a machine at your sink. Many garbage disposals work very well with years of service without any repairs. The most common problem experienced is usually from people trying to grind up too much food at once. Other issues can occur with the disposal itself, this article will discuss garbage disposal and repairs in Tucson.

The most common garbage disposal in the Tucson area and across the United States is the InSinkErator Badger 5 - 1/2 HP garbage disposal. This unit is by far the most common disposal used in Tucson. Its simple and reliable design will provide years of use without hassle. All InSinkErator disposals are made in America (the last time I checked) and come with a two-year warranty from the manufacturer. These disposals are simple to install which saves customers money. All InSinkErator disposals come with a tool to unjam and a reset breaker to protect the motor from damage in the event of a blade jam.

As mentioned earlier this is the most common InSinkErator Badger 5 - 1/2 HP is the most common disposal found in the Tucson area. It's also the disposal sold at all of the plumbing supply shops and carried by nearly all plumbers. InSinkErator themselves manufacture additional units if home owners are interested in upgrading to a better unit. InSinkErator manufactures the Evolution series of garbage disposals which offer more horse power and a quieter operation. These disposals are available if desired. There are other manufactures of garbage disposals such as Waste King and such. These units do work well and I have seen consumer reports that show they can be the better value if purchased at the right price. But in reality they are not commonly found in Tucson and experience is limited to really pass judgment. For my money the InSinkErator disposal is the appliance of choice.

Let's take a minute to discuss the actual repair of garbage disposals in Tucson. Common problems with these units is caused from too much stuff being put in the disposal. Too much food can clog the outlet pipe and cause it to back up. Hard objects can fall into the disposal and jam the blades. When the blades are stuck, we can use the provided tool to manually rotate the grinder blades and free the stuck material. Sometimes this is not enough, and we must remove the disposal from the sink and surgically remove debris from the blades. This is common when fish tank stones get washed down the drain by accident. If leaking or strange sounds start coming from the disposal it most likely will need to be changed. Garbage disposals are considered a small motor and these motors are rarely worth repairing themselves. A new disposal can be installed at a reasonable rate with a two-year warranty from the manufacturer.

Garbage disposals are a great convenience in homes that many enjoy and come to expect. When these appliances don't work, it can cause headache in our busy lives.
